afshaan@DESKTOP-94VFN85:~/day6$ base64 skills.txt> skills.b64
afshaan@DESKTOP-94VFN85:~/day6$ base64 --decode topics.b64
base64: topics.b64: No such file or directory

No.	Command	Purpose	Practice command	What it does
1	mktemp	Create a temporary file	mktemp	Creates a uniquely named temporary file.
2	shuf	Generate random selections	shuf -i 1-20 -n 5	Prints 5 random, distinct numbers between 1 and 20.
3	yes	Repeat text continuously	yes "Linux practice" | head -n 3	Prints the text 3 times.
4	paste	Combine files side by side	paste names.txt skills.txt	Combines corresponding lines from two files.
5	expand	Convert tabs to spaces	expand tabs.txt	Replaces tab characters with spaces.
6	unexpand	Convert spaces to tabs	unexpand -a spaces-input.txt	Converts suitable groups of spaces to tabs.
7	od	Inspect file characters or bytes	printf 'ABC\n' | od -c	Displays characters, including the newline.
8	base64	Encode or decode data	printf 'hello' | base64	Encodes hello into Base64 text.
9	sha256sum	Calculate a checksum	sha256sum sample.txt	Calculates a SHA-256 hash of a file.
10	md5sum	Calculate an MD5 checksum	md5sum sample.txt	Calculates an MD5 hash; not suitable for security-sensitive verification.
